

To whom it may concern,

This is a letter of recommendation for Brian Wiley. When Brian asked if I would write him a letter of recommendation I was happy to it. Brian is a very intelligent and motivated student who I have great respect for.

I had Brian for a Data Structures class. Brian always went beyond what was expected in the class. He would try new ways to look at the problem, and was very good at thinking abstractly about the issues of the problem. He would then help the other students in the class with homework, and would help them better appreciate the issues involved in applying Data Structures to real world issues.

I found Brian to be at the top of his class in all areas. He is well spoken and I believe he would make a good instructor. He is curious and driven, both key qualities in a researcher, and it is my opinion that he would make an outstanding researcher if he chooses to go on for a doctorate. He also picks up new material quickly and can extend it other problems.

I recommend Brian for any graduate program without any qualifications.

Dr. Charles W. Kann

Lecturer, JHU Whiting School of Engineering, Engineering for Professionals
